

D. COMMITTED PROJECTS

Other road improvement projects in the Study Area are currently in progress or are scheduled for future completion. Table 10 lists those Indiana projects in the Study Area that involve intersection improvements, added travel lanes, road reconstruction, traffic signal modernization, and bridge rehabilitation or replacement. These projects include programmed and planned projects. Programmed projects have an established letting date; whereas, planned projects do not yet have a letting date. Of the Indiana projects that are listed for the Study Area, only three are planned projects. These projects include, road reconstruction of US 50 in Dearborn County to provide vertical clearance at the CRC railroad overpass, 0.6 miles west of the Indiana/Ohio state line; road reconstruction of US 50 in Ripley and Jennings Counties from the east urban area boundary of North Vernon to SR 101 in Ripley County; and replacing the bridge over Green Valley Creek, 6.5 miles west of SR 129 in Switzerland County.

In Kentucky, a new two-lane limited access facility is presently being constructed from a new interchange on I-71 (about one mile west of the existing KY 35 interchange) to US 42 at the Markland Dam Bridge. The present route from the Markland Dam Bridge to I-71 is 10.1 miles via US 42 to Warsaw and KY 35 from Warsaw to I-71. Existing KY 35 is a winding roadway with narrow lanes and shoulders. The new connector will shorten the distance from the Markland Dam to I-71 to 7.4 miles, and is designed to accommodate truck traffic to manufacturers along US 42. The KYTC 2000 Six Year Highway Program also includes the widening of US 42 to three lanes from Carrollton to the Markland Dam. This widening is scheduled for construction in Fiscal Year 2007. Figure 8 shows the location of programmed and planned projects in the Study Area.
